

Dictionary

Storing Data with Key-Value Pairs

Dictionary syntax

A dictionary is a collection of data stored as key-value pairs. Each unique key points to a specific value, like a label on a file folder.

Dictionary: `window\_spec`

Code examples

```
# 1. Creating a dictionary
window_spec = {
    'type': 'Double-Hung',
    'width_mm': 900,
    'u_value': 1.6,
    'is_operable': True
}

# 2. Accessing a value using its key
print(window_spec['type'])
# Output: Double-Hung

# 3. Adding a new key-value pair
window_spec['supplier'] = 'Pella'

# 4. Modifying an existing value
window_spec['u_value'] = 1.4
print(window_spec['u_value'])
# Output: 1.4
```
