

String Literals

Representing text data in Python

Single-Line Strings

For text that fits on a single line. Can use single (') or double (") quotes.

```
# Using single quotes
material = 'Concrete'

# Using double quotes
room_name = "Architect's Studio"
```

Multi-Line Strings

For text that spans multiple lines. Use triple quotes (""" or """).

```
# A project description
notes = '''Client requires:
- Open floor plan
- Natural lighting'''
```

Escape Sequences

Special characters prefixed with a backslash (\).
Useful for newlines, tabs, and quotes inside strings.

```
# Path to a file
file_path = "C:\\Users\\Architect\\Floorplan.dwg"

# Text with a newline
message = "First Floor\nSecond Floor"
```
