

Category	Operator	Description
Arithmetic	+	Addition: Adds two operands.
	-	Subtraction: Subtracts the second operand from the first.
	*	Multiplication: Multiplies two operands.
	/	Division: Divides the first operand by the second.
	%	Modulus: Returns the remainder of the division.
	**	Exponentiation: Raises the first operand to the power of the second.
	//	Floor Division: Divides and returns the integer value of the quotient.
Comparison	==	Equal to: True if both operands are equal.
	!=	Not equal to: True if operands are not equal.
	>	Greater than: True if the first operand is greater than the second.
	<	Less than: True if the first operand is less than the second.
	>=	Greater than or equal to: True if the first is greater than or equal to the second.
	<=	Less than or equal to: True if the first operand is less than or equal to the second.
Assignment	=	Assigns the value of the right operand to the left operand.
	+=	Adds the right operand to the left and assigns the result to the left.
	-=	Subtracts the right operand from the left and assigns the result to the left.
	*=	Multiplies the left operand by the right and assigns the result to the left.
	/=	Divides the left operand by the right and assigns the result to the left.
	%=	Takes modulus using two operands and assigns the result to the left.
	**=	Performs exponential (power) calculation and assigns value to the left.
	//=	Performs floor division and assigns value to the left.
Logical	and	Returns True if both statements are true.
	or	Returns True if one of the statements is true.
	not	Reverses the result, returns False if the result is true.
Bitwise	&	AND: Sets each bit to 1 if both bits are 1.
	^	XOR: Sets each bit to 1 if only one of two bits is 1.
	~	NOT: Inverts all the bits.
	<<	Zero fill left shift: Shifts left by pushing zeros in from the right.
	>>	Signed right shift: Shifts right by pushing copies of the leftmost bit in.
Membership	in	Returns True if a sequence with the specified value is present.
	not in	Returns True if a sequence with the specified value is not present.
Identity	is	Returns True if both variables are the same object.
	is not	Returns True if both variables are not the same object.
